Project Title:

ICU Tracker App

Project Description:

The ICU Tracker App was created for patients in ICU to be able to track their progress. The app is cross-platform, easy to use and designed for those with less control of their hands and bodily functions through the use of large buttons and high contrasting colours.

The app contains the means for patients to be able to improve their overall fitness levels by performing set exercises through the exercise tab. It also allows patients to add achievements and goals as well as complete hospital set goals and view their CPAX (Chelsea Critical Care Physical Assessment Tool) score.
